

PEACH POWER COMMITTEE MEETING MINUTES 6-4-19 (DRAFT)

ATTENDING: Paxton, Peaches, George P., Dennis T., Ichabod

REPORTS: Shane not present for staff report, Paxton - no new board business to pass to the group. Dennis - LUMP committee is gathering the data needed before proceeding with a hiring of an engineer for the grey water survey. Crews will be monitoring grey water production throughout the event.

OLD BUSINESS:

Update on the new Solar Array Project: George - Panels are scheduled for delivery in Eugene on 6/15, installation on site to happen 6/17. George will be present to project manage. There is currently a hornets nest attached to the structure but the proper people have been informed and it will be dealt with before installation day. Peaches - The agreed upon sign text has been submitted to the sign crew and is in the works. Construction crew has it on their list to build out some new seating in the shaded area around the array and give the area a facelift.

Discussion re: ways to repurpose original panels and ideas for new donated: George - the panels from the original array are considered low voltage and the new ones in the garage are considered high voltage. There are inverters that are able to combine these two different types to feed one system but would need to be purchased. Consideration of a new mobile charging station for zavanadu. Would need a project manager and allocation of funds. No one seems to have the bandwidth this close to the event so we will table and hopefully partner and collaborate with the sustainability initiative (S.I.) folks after the event.

Conservation: Key is ongoing education. Ichabod highlights that people better understand and comply when common measurements and comparisons are used such as gallons of water or how long/much it takes to power a coffee pot. Peaches suggests Educational articles in the FFN as an ongoing feature and will contact the S.I. group for collaboration.

George has the pathfinder from Bob1 and would be happy to set it up and use it whenever we want to set a time. It might be good to try it out at the Winery property as well.

NEXT MEETING: Monday June 24th at the fair site, meet in main camp 6pm
