

PEACH POWER COMMITTEE MEETING NOTES

6-9-21

ATTENDING: Committee members - Peaches, Paxton, Bob1, Wayne O., George P. Guests - Tom G., Dennis T.,

Bob1 gave an update on his conversation with Tyler at EPUD regarding potential for a solar array at one of our meters to be able to offset all other remaining meters/accounts on our property. A very interesting and promising cost savings for the future and unique program for non-profits that EPUD has developed.

Update on capital project process to move the HUB main electrical update forward. Peaches is working with Shane and the treasurers to expedite the project since it has already been vetted and approved and has some safety considerations. We should get an updated bid from Reynolds Electric. Peaches will reach out to Michael H. for who to contact at Reynolds.

Compost conversation continued. The project will be discussed at the upcoming Fixed Assets Committee meeting and all are encouraged to attend. There is work being done to secure an Agricultural building certification for the structure from the county. George wants to know how far along the actual specs and plans for the completed project are and if there is an architectural and/or engineering firm involved. We need to make sure that each phase is completed in a way that fits the completed project. Peaches will work to find out how far into the structural planning the group has gotten.

For now the group agrees that updates and communications can be done via email and we will meet again as needed.
